

Protect sensitive diners by isolating temperature monitoring and sanitation.

FACT: Using probe wipes to sanitize a thermometer between uses is not enough to prevent the cross-contact of allergen proteins.

If your staff doesn't know this, it can be harmful or even deadly to customers with allergies.

Building upon the foundation of the original **GREEN** cleanTEMP (designed to prevent cross-contamination by adding sanitizer to the chef uniform) the Allergen-Free cleanTEMP does double duty without relying on sanitizer to prevent the cross-contact.

- Purple color indicates use for allergen-free menu items only
- Regulates best practice without adding extra steps
- Translucent tube makes filling with sanitizer solution easy
- Great addition to any allergy prep station or chef uniform
- Can be used with most dial, digital and HACCP thermometers

Preventing Cross-Contact

Paired with a dedicated thermometer in your allergy prep station, the purple Allergen-Free cleanTEMP reminds its operator to avoid the Top 8.

Preventing Cross-Contamination

cleanTEMP regulates sanitation between thermometer uses by adding sanitizer to the chef uniform.

cleanTEMP is a patented product of Vanco, Inc
